Professional Summary

Software Developer with 3+ years of experience building scalable, high-performance web applications using React, Next.js, TypeScript, and modern CSS frameworks. Proven ability to lead frontend development, collaborate cross-functionally with product, design, and backend teams, and deliver clean, accessible, and responsive user interfaces. Experienced contributing to backend services (Node.js/Express, PostgreSQL/MongoDB) for API design, authentication flows, and performance-sensitive endpoints. Passionate about performance optimization, UX best practices, and mentoring developers in fast-paced, Agile environments.

Core Skills

Frontend Technologies

- React.js, Next.js, TypeScript, JavaScript (ES6+)
- HTML5, CSS3, Tailwind CSS
- Responsive & Accessible UI

Architecture & Performance

- Component-driven architecture
- State management & RESTful API integration
- Web performance optimization & SEO best practices

Tools & Workflow

- Git & GitHub
- Vite, Webpack
- Agile collaboration

Backend Exposure

- Node.js, [Express.js](#) TypeScript n API design, routing, authentication middleware
- PostgreSQL, MongoDB schema design, queries, and basic migrations
- REST API integration, token-based auth (JWT), and server-side performance tuning

Professional Experience

Fero Event (Live Streaming Platform)

<https://feroevent.com/>

Remote

- Led the development and optimization of a live-streaming event platform, delivering smooth real-time user experiences for large audiences.
- Built and maintained scalable, reusable UI components using React.js, improving development speed and long-term maintainability.
- Collaborated closely with product managers, designers, and backend engineers to translate business requirements into polished, user-friendly interfaces.
- Improved performance and responsiveness across devices through optimized rendering and modern frontend best practices.
- Ensured high standards of accessibility, usability, and responsive design across the application.

Manajer (WhatsApp Group Manager)

<https://manajer.vercel.app/>

Remote

- Designed and owned the frontend architecture for a student referral and management system using React and TypeScript.
- Led and mentored frontend developers, conducted code reviews, and enforced clean code and best practices.
- Integrated RESTful APIs for authentication and data operations, working in an Agile environment to deliver iteratively.
- Delivered a solution that significantly improved workflow efficiency and user engagement for educational institutions.
- Backend contributions: designed and implemented authentication and authorization flows (JWT), developed and documented REST endpoints for group and user management, wrote server-side logic for analytics aggregation (PostgreSQL/MongoDB) consumed by frontend dashboards.

Selected Projects

Cinalytics (Web app feature tracking system)

<https://cinalytics.vercel.app/>

- Platform to track performance and interactions of other applications; focused on real-time updates, performance optimization, and responsive UI.
- Tech: React.js, TypeScript, Tailwind CSS Node js Express, postgre sql , mongo db.
- Backend contributions: implemented event ingestion endpoints, batching and aggregation logic, and efficient DB schemas for time-series counts (Node.js + PostgreSQL), ensuring low-latency reports for the frontend dashboard.

Manajer (WhatsApp group automation system)

<https://manajer.vercel.app/>

- System for tracking interactions and automating group tasks; emphasized scalability, clean UX, and maintainable frontend architecture.
- Tech: React.js, Tailwind CSS, REST APIs Node js Express, Typescript postgre sql
- Backend contributions: implemented API endpoints for interaction tracking and user management, designed schema for storing aggregated interaction metrics, and added server-side pagination and caching to speed dashboard loads.

Uniplug (MultiTenant Ecampus system)

<https://uniplug.vercel.app/>

- System for tracking interactions and automating group tasks; emphasized scalability, clean UX, and maintainable frontend architecture.
- Tech: Next.js, Tailwind CSS, REST APIs Node js Express, Typescript postgre sql , mongo db.
- Backend contributions: implemented API endpoints for Authentication for tenants staff and student

Strengths

- Frontend Leadership: Comfortable owning frontend architecture and guiding teams.
- Problem Solving: Strong debugging, optimization, and performance-tuning skills.
- Collaboration: Excellent communicator in cross-functional Agile teams.
- Continuous Learning: Actively adopting modern frontend tools and best practices.
